

PROTECT YOURSELF

Cybersecurity Awareness Month

Learn essential tips to safeguard your personal and financial information from scams and cyber treats.

- Use Multi-factor Authentication
- Make sure your passwords are strong
- Keep your software up to date
- Protect yourself by recognizing phishing

We will call you but we will **NOT** ask for your personal information or account numbers.

EMAILS:

Phishing is fraudulent emails that appear to come from legitimate sources, banks, or government agencies asking for personal information, or with links to malicious websites or attachments. Stay alert and cautious. Always Confirm the sender's or caller's identity by verifying their actual email address, phone number, or website.

SCAM TIPS:

If there's a DOUBT, log in to the official website or app or contact the company DIRECTLY! Protect your personal and professional information by using strong passwords. If you suspect a scam, delete the questionable email, or text, and block the number.
